

EARTH RECYCLE CO., LTD.

Featured Technologies

Corporate Profile Earth Recycle CO., LTD

- Office location: 726 Tonan Taishi-cho Ibo-gun Hyogo, 6711523, Japan
- ◆ Tel/Fax: +81-792-76-6275

URL: <u>http://www.earthrecycle.net/</u>

Established: April 16, 1997

Capital: JPY 10,000,000

President: Takashi Tachibana

Contact: <u>kengo-y@earthrecycle.net</u> Kengo Yamada, Finance Manager Featured Technologies Offered By Earth Recycle CO., LTD

- 1. Thermal cracking fuel production from waste plastic (processable with PVC/PVDC/PET/PUR)
- FTPO (Fruit To Pyrolysis Oil) production from palm / jatropha / waste edible oil
- Total recycle system with separation of compound raw materials (especially with FRP/Carbon Fiber)
 Applicable to sterilization and recycling treatment of infectious

medical waste

- 4. Quality improvement of through solvent extraction
- 5. n-paraffin produced through palm/jatropha FTPO process

PATENT RIGHTS OWNED BY ER

ER Patent List

Application#	Description	Note
$2\ 0\ 0\ 9-1\ 2\ 2\ 7\ 5\ 1$	Fuel production	
2 0 0 8 - 3 3 5 7 2 8	Fuel production from waste plastic	
$2 \ 0 \ 0 \ 6 - 7 \ 2 \ 1 \ 0 \ 0$	Fuel production from waste disposals	
2001-15174	Pyrolysis process applied to waste plastic	#4768920
1 1 - 2 3 2 1 0 6	Pyrolysis process applied to waste plastic	#4485621
P C T / J P 2 0 0 9 / 0 6 6 3 4 7	FTPO production	* Also applied in Malaysia/Indonesia
2010-129599	Pyrolysis furnace for waste plastic	
2010-180938	Round lateral type pyrolysis furnace	
2 0 1 0 - 2 0 0 5 2 6	FTPO production system	
2 0 1 0 - 2 0 0 5 2 7	Dispersive FTPO production system	
2004-327047	Separation method of useful substance from compound plastic with PVC/PET and alminium compound film	#4637551
2011-140141	Separation method and such device of compound plastic waste	

Thermal Cracking Fuel Production From Waste Plastic

Advantages of Thermal Cracking Fuel Production from Waste Plastic etc.

Product benefits

- Used as supplementary fuel for heating oil, bunker A, heavy oil, fuel for in-house generator etc. without remodeling of existing facilities
- Mainly PE/PP/PS processed with stable results, but plastic with other commingled extraneous substances can also be processed. (PVC/PVDC/PET/PUR/sand/paper/metals/water/seawater etc.)
- Processed even with waste tire with non-plastic materials, waste edible oil, waste lubricant oil, solvent

Cost benefits

- Cost saving of waste disposal process such as simplified or omitted pre-process equipment (compression/packing)
- Simple operation/maintenance, no coking

Other benefits

- Enhance corporate reputation contributing to green environment. (No dioxin emission, decrease in volume of landfill, etc.)
- Safety with operation under ordinary pressure

Yield% and Usage of Product Materials

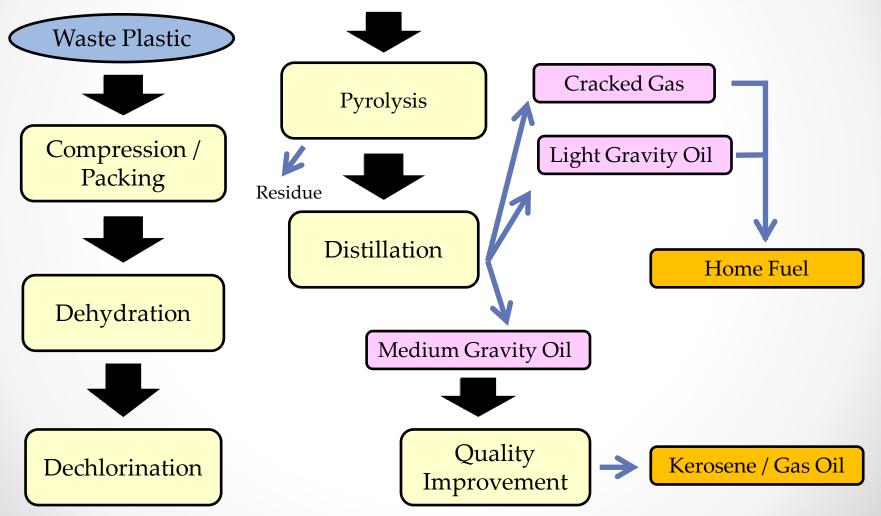

<Thermal Cracking Oil Produced from Waste Plastic>

Product material	Yield (wt%)		Usage
	3P	Household plastic	
Cracked gas	5~15	10~25	Home fuel
Pyrolysis oil	78~85	55~78	Burner fuel
Light grade oil	30~40	20~40	Home fuel
Middle grade oil	40~50	30~40	Burner fuel/Power generator
Heavey oil			Burner fuel
Residue	5~15	15~25	Supplementary fuel/Base course materials

Aspects of Thermal Cracking Oil from Waste Plastic

Aspects of Pyrolysis	Oil	<before imp.="" qlty=""></before>	<after imp.="" qlty=""></after>		
Item	Units	Pyrolysis Oil from House Waste Plastic	Midium Gravity Oil from House Waste Plastic		
Density at 15°C g/cm		0.82	0.86		
Viscosity at 30°C	CST	1.5	5.0

Bio Diesel Fuel Production Through Pyrolysis Process

<Palm/Jatropha/Waste Edible Oil>

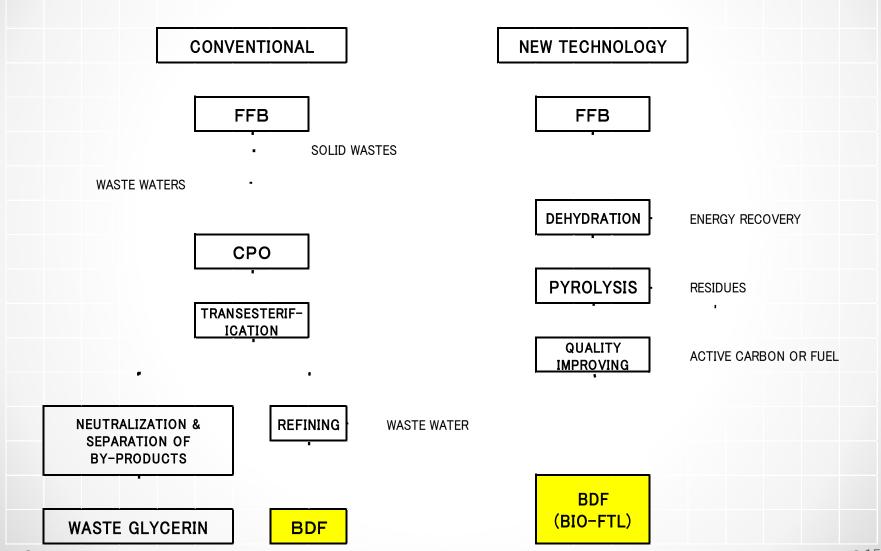

Advantages of FTPO Process

- 1. Direct production without CPO production
- 2. Quality of final product (oil pouring point -17°C)
- 3. Productivity (Rotten fruit used / shells and bunches used for active carbon)
- 4. No wastes

Adv #1 : Direct Production Without CPO Process

Process Comparison <Conventional vs ER process>

COMPARISON WITH VARIOUS FTPO PRODUCTION PROCESS

	PROCESS REACTION RATE		REACTION CONDITION	FREE FATTY ACID REMOVAL	FREE FATTY ACID CONVERSION TO FUEL	GLYCERIN CONTAMINATION	CATALYST
1	Methyl Ester	Fast	60℃ at Atmospheric Pressure	Need	Impossible	Yes	Yes
2	Metal Oxidation	Rather Slow	60℃ at Atmospheric Pressure	Need	Impossible	Yes (some)	Yes
3	Immobilized Enzyme	Slow	40℃ at Atmospheric Pressure	Needless	Impossible	Nil	Yes
4	Supercritical Alcohol	Fast	350℃ 43Mpa	Needless	Possible	Nil	
5	Ion-Exchange Resin	Fast	50℃ at Atmospheric Pressure	Needless	Possible	Nil	
6	Hydrogeneration Decomposition	Fast	Hydrogen at High Temperature and High Pressure	Needless	Possible	Nil	Yes
7	GTL Fischer-Tropsch Reaction	Fast	Gasify FT Synthesis	Needless	Possible	Nil	Yes
8	Pyrolysis	Rather Slow	430℃ at Atmospheric Pressure	Needless	Possible	Nil	Yes (inexpensive)

Raw Material Feeding Conditions: In case of No.1 to 7, CPO are fed. In case of No.8, FFB are fed

Adv #2. Quality of Final Product <ER BIO FUEL>

Property Comparison with Other Oil

Items	Unit	ER BIO FUEL	NEXBTL	GTL, ftr	FAME	Gas Oil		
Density at 15℃		810	780 ~ 785	770 ~ 785	885	835

Project Examples

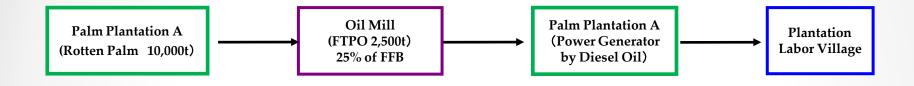

Base Premises

```
* 50 Palm Plantations (125,000t)
*Active Carbon 18,750t (15% of FFB)
*Yearly Power Generation (kw) now 140MW with existing diesel generators
```

Project Examples

Concentrated Method

Base Premises

*Yearly Power Generation : 10MW

Adv.#4 Environmental Solutions

Environmental Solutions

- 1. FFB solid residues in pyrolysis process reused as fuel
 - Pyrolysis gas : 5,600 kcal/kg
 - Solid palm shells & fibers 3,150 kcal/kg
 - Solid jatropha 5,726 kcal/kg
- No water wasted unlike CPO process

 (45% of moisture is vapored in drying process and deodorized)
- 3. CO2 emission reduced by 2.624kg/ℓ

WASTE SUBSTANCES AND WASTE WATER AT CPO MILL PLANT

Environmental Impact	Waste Substances & Waste Water (Gravimetric Ratio)	Present Status
Air Pollution	EFB: Empty Fruit Bunch(29wt%)	EFB are incinerated and its heat energy is used for steam generation as heat source.
		The smoke and soot from incineration have come to be seen as a pollution problem.
		It will be prohibited by a law in near future.
	Mesocarp Fiber(12.5wt%)	Those are the residues after oil squeezing from fruits and used as the boiler fuel to
		take steam for sterilization process in the plant.
	Shell (8.0wt%)	Those are left as the residues after oil squeezing from fruits and used for the boiler
		fuel as well as mesocarp fibers.
Water Pollution	POME: Palm Oil Mill Effluent	1.5 m ³ water at the maximum are necessary to treat 1.0 ton FFB at CPO plant and
		50%of CO are finally discharged as POME.
		Discharging source of POME are as below.
		(1) Condensation liquid (36% / POME) from sterilizing facility.
		(2) Waste water (60% / POME) from water clarification facility.
		(3) Waste water at hydro cyclone process.

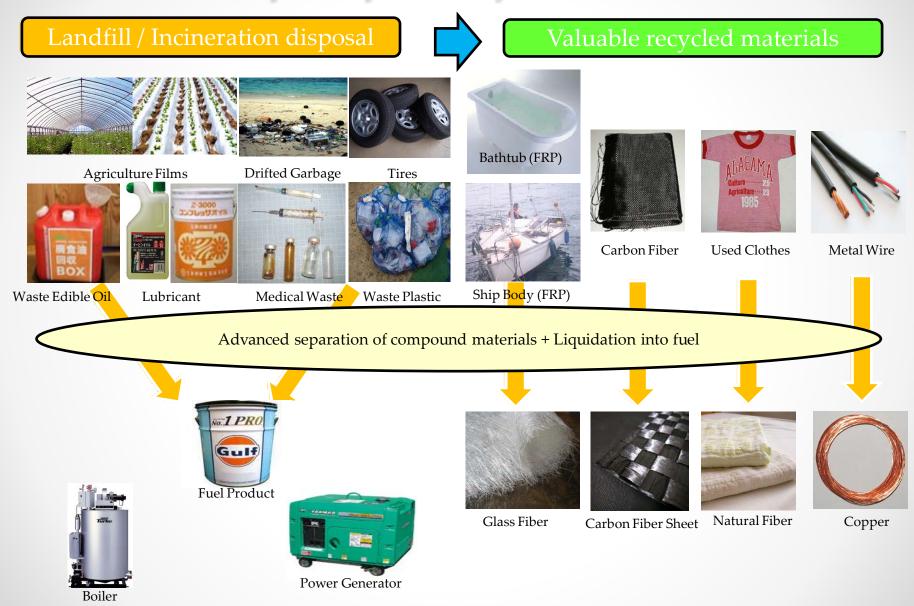

Solution of Environmental Pollution by Solid Wastes and Waste Waters

- 1. Pyrolysis of FFB residues such as fibers, shells are done and its pyrolysis gases and small quantity of oil are taken and these are used for fuel at own plant. Respective heat value are: pyrolysis gas = 5,600kcal/kg, solid fuel of palm = 3,150kcal/kg (13,180kj/kg), solid fuel of jatropha = 5,726kcal/kg (23,960kj/kg)
- 2. 45% of moisture contained in FFB are separated as vapors at drying process. And the vapors which have strong offensive odor are deodorized with high temperature oxidation at 800°C and converted into high calorie and superheat vapor gas which are used at drying and pyrolysis process, then emitted to air from stack at 250 as non-pollution gas.

Compound Separation Process Applied To

Sterilization And Recycle Treatment Of Infectious Medical Waste

Process Overview <Medical Waste Treatment>

Resin syringes Infusion apparatus Gauze Rubber

- Securely sterilized
- Dried
- Separated

- Process duration : 30minutes / batch
- Volume of waste : 50 L ~ 2000 L / batch
- Space necessary : 6mL x 4mW x 6mH

Advantages <Medical Waste Treatment>

Product benefits

- Recycled as oil/valuable raw materials
- PVC can be treated

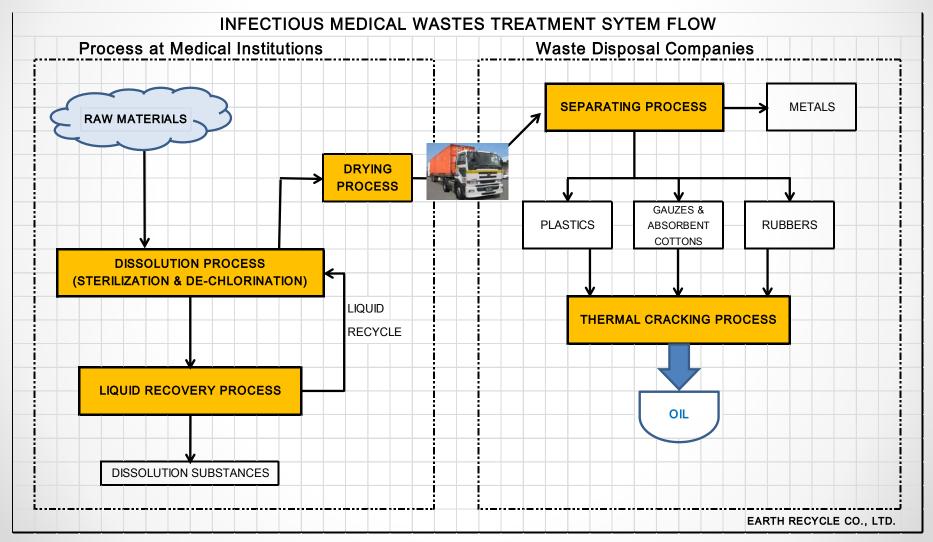

Cost benefits

- Combination of sterilization and separation (new process)
- Solvent recycled during the process
- Automatic operation without special skills

Other benefits

• No waste liquid / noxious gas discharged

Process Flow <Medical Waste Treatment>

Quality Improvement Of Solvent Extraction

Quality Improvement through Solvent Extraction

Product benefits

- 1. Fuel stabilized during the process and suitable for sale (product quality improved through thermal cracking process)
- 2. Fuel for power generator or auto fuel
- 3. Deodorizing and oxidation stabilization of nitrogen compound / organic chloride

Cost benefits

- 1. Recycle 95% of solvent during the process
- 2. Automated operation

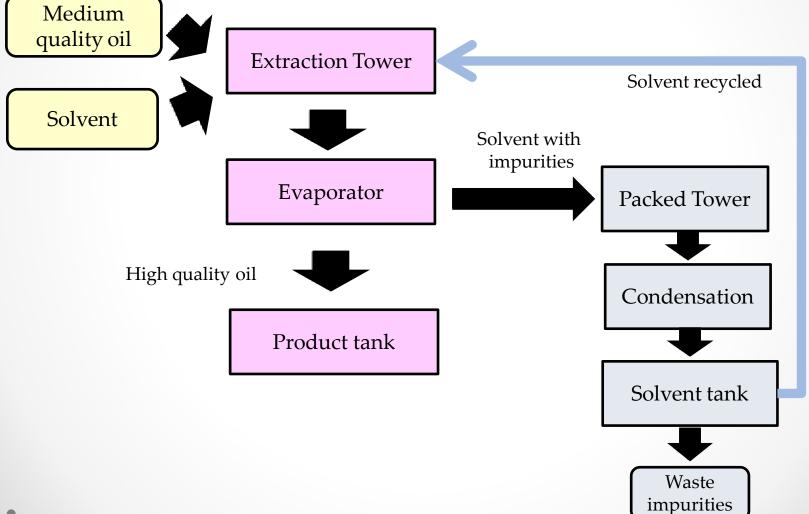

Other benefits

- 1. Operated either with batch / sequence system
- 2. Operated in oxygen-free condition
- 3. Safely operated under normal air-pressure / normal temperature

Aspect of Improved Quality through Solvent Extraction

Raw material :	Household wa	Raw material : Waste lubricate oil			
	Before	After		Before	After
Color	green	stable	Color	yellow brow	stable
Ph	2	6	Ph	4	6
Nitrogen	1,200	130	Nitrogen	440	130
Chlorine	2,500	580	Chlorine	650	130
Sulfur	140	100	Sulfur	1,800	1,600
Odor	Irritating odor	Improved	Odor	Odor	Improved

Process For Quality Improvement <Solvent Extraction>

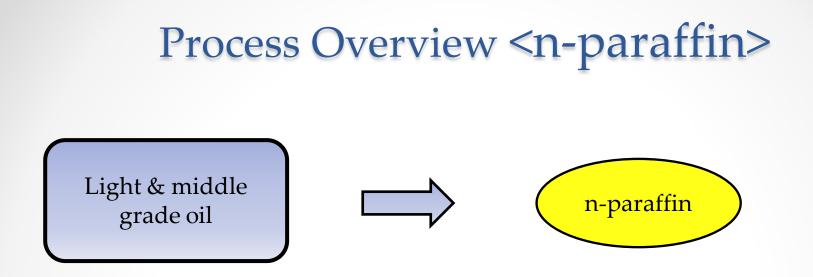

Quality Improvement Equipment

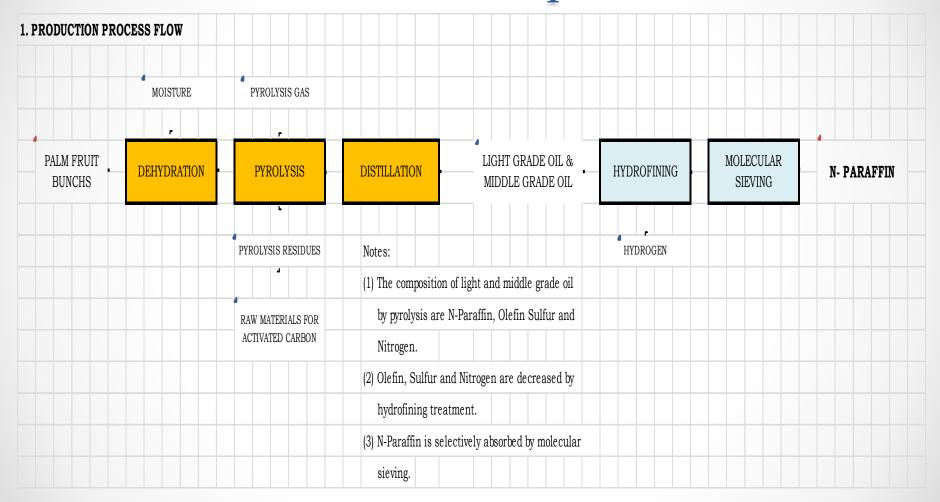

N-paraffin Production

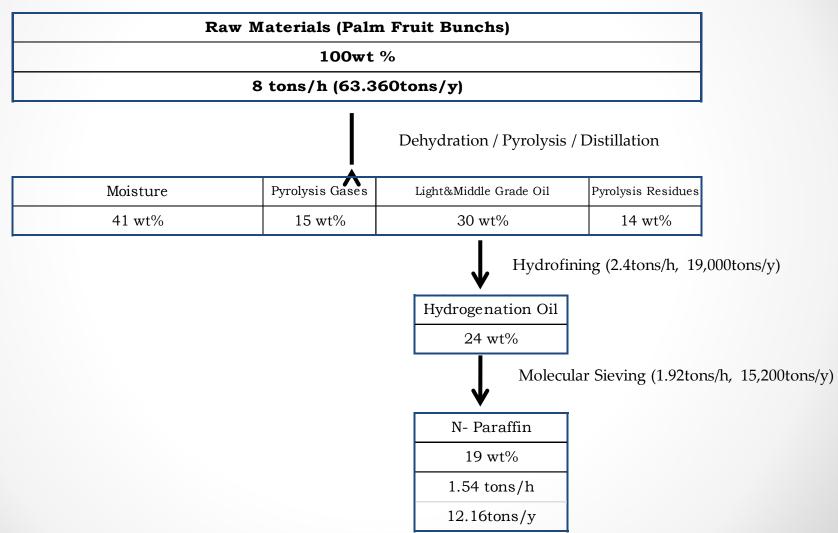

- n-paraffin produced through light / middle grade oil through pyrolysis process
- Olefin, sulfur, nitrogen decreased by hydrofining
- n-paraffin selectively absorbed in molecular sieving

Process Flow <n-paraffin>

Material Balance <n-paraffin>

Plant Capacity <n-paraffin>

(1) Pyrolysis : 8t/h

(2) Distillation tower : 3t/h

(3) Hydrofining : 2.4t/h

- Reaction temperature 280° to 340° celsius
- Pressure 30 to 50kg/cm2
- Liquid hourly space velocity 3.0 to 5.0 hr-1

(4) Hydrogen generator : 50 Nm3/t x 2.4 = 120 Nm3/h

(5) Molecular sieve : 1.92t/h

Product Feature <n-paraffin>

- 1. Product usage
 - Synthetic detergent
 - Raw material of non-ionic synthetic
 - Raw material of chlorinated paraffin and solvent
- 2. Market price tripled of biodiesel
